

**Formulated to Increase  
the Speed of Bicycles,  
Skateboards & Rollerblades**

- Works under heavy loads and high temperatures
- Actually polar bonds to the metal surface and will not sling off
- Penetrates into sealed bearings

Oils normally used for lubrication are displaced by moisture and lose their effectiveness. They don't last long. Not so with SpeedX. It polar bonds to metal and hugs it like a magnet. SpeedX releases the surface tension of moisture, displaces it and maintains a fantastic lubricating capability that is better than products with Teflon. SpeedX provides remarkable lubrication and smoother and quieter operation of:

- In-line Skates • Skateboards • Chains and Bearings
- Roller Skates • Bicycles Gears, Derailleurs
- Chains and Bearings • Other Sports Equipment

SpeedX gives long-lasting, heat-resistant lubrication, decreases wear and extends the useful life of treated items.

Regular application of SpeedX will keep bicycle chains, sprockets and derailleurs operating at peak efficiency and free of rust.

**Improved Sprocket Efficiency**

*"When I first treated the chain, I noticed it was quieter and smoother. The shifting was more responsive and accurate, which is important when you're in a race. SpeedX also keeps the chain from rusting when it gets wet."*

**Rick Tinney, Cajun Cyclists Bicycle Racing Team**

**Go Faster**

*"I've tried them all when it comes to slick stuff and SpeedX blows 'em all away. I've never gone so fast!"*

**CH, Dallas, TX**

**Break Records**

*"I just tried SpeedX on my slot car. With no other modification, my lap time dropped by nearly a tenth of a second, enabling me to post the fastest lap ever at my local track!"*

**Tim Kern, Aero-News Network**

Hot, new technology, commitment to quality and a no-nonsense, money back guarantee have established the CorrosionX mark as one that can be trusted.

**Stops Corrosion • Lubricates • Penetrates**

**CORROSIONX**®

# CORROSIONX<sup>®</sup>

## **Stops Corrosion & Rust Lubricates & Penetrates**

CorrosionX is the most useful and versatile product which displaces moisture, stops corrosion instantly and provides long-lasting protection that a customer calls it "a complete service facility in a can."

CorrosionX is the ideal product to guard against rust and corrosion on fishing gear, knives, in-line skates, skateboards, bicycles and other sporting equipment. It polar bonds to metal, won't attract dust and won't allow rust to start even in the rain. It also lubricates mechanisms to work smoother without jamming. A light spray of CorrosionX on power heads, generator sets and engines two or three times a year will keep them looking like new - even in saltwater conditions.

## **CorrosionX is Multi-Funtional & Environmentally Friendly**

CorrosionX is also a super lubricant and penetrant. It lubricates under heavy loads and high temperatures. It can be used on sheaves, hinges, locks, cables/wire ropes, windlasses or other rotating devices. It is ideal for fishing reels, bicycles and sporting equipment. CorrosionX penetrates new equipment to prevent rust and penetrates corroded or rusted nuts, bolts or fittings and loosens them within a few minutes without leaving a messy wax coating.

The Volatile Organic Content (VOC) of CorrosionX is only 8.6% compared to 76% used in another brand. Plus it's nontoxic, non-carcinogenic, and is nonflammable.\*

A supervisor in a maintenance facility for a major oil company called it an "inventory reducer" because they use it for so many different applications.

And, it's economical. Users estimate that a single 470ml can of CorrosionX will outperform and outlast 8 - 10 cans of a popular household "lubricant/penetrant".

\* propellant used in aerosol can is flammable.

*"Superb Product!! After years of suft fishing, I was considering replacing my outfit. CorrosionX arrived just in time. After disassembling my reel and coating each part with CorrosionX, it operates as if I just bought it off the shelf. It's also great at quieting hinges, whether on a car or in a house"*

**RB, Jacksonville, FL**

*"CorrosionX seems to be an excellent product for any electrical application. Spray it on plug wires in your boat motor or davits. It makes your lines run smoother as a lubricant and for salt-water fishermen it will not allow any salt buildup on your equipment."*

**DEH, Oklahoma City, OK**

Originally developed for the aerospace industry to prevent corrosion on military airframes, exotic ingredients have been added to CorrosionX formula to create SpeedX and ReelX to "optimize" it for their specific uses.

# REELX<sup>®</sup>

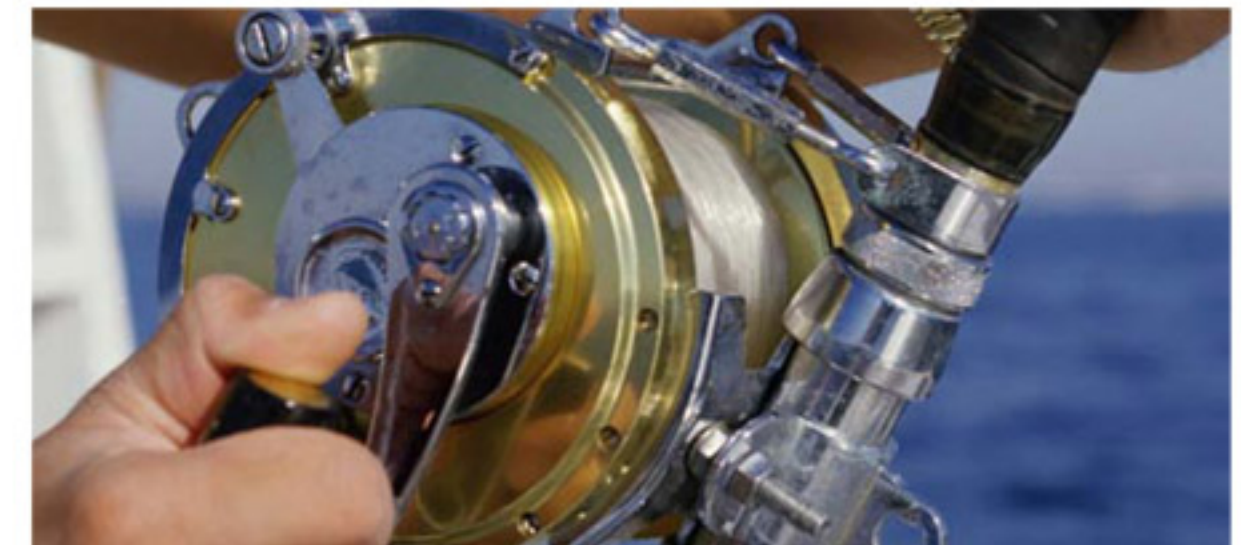

## **The Best Thing That's Happened to Your Fishing Reel Since You Took it Out of the Box!**

ReelX is the new, hi-tech, extreme-pressure lubricant that stops and prevents wear, corrosion and rust. It contains no wax, tar, silicone or other solids; so It Can't Gum-Up. It outperforms all other lubricants, displaces moisture, and won't harm monofilament.

- Improves reel performance
- Stops/prevents rust and corrosion
- Is not harmful to the environment

ReelX is perfect for fishing reels. Just a touch on moving parts improves reel performance dramatically.

CorrosionX was tested by the North American Fishing Club (NAFC) and received the Club's endorsement and was granted their seal of approval.

The US Long Casters Team, based in Hawaii, tried every popular reel lubricant on the market and chose ReelX for its ultimate lubrication qualities.

*"I've tried them all, but ReelX is the best. Casts are longer, gears are quieter, smoother, and no more rust or corrosion."*
